DEMCO AUTOMATION INTRODUCES “READY-TO-USE” CONTROL SYSTEM

(Quakertown, PA) Dave Duemler, Technical Director of Demco Automation, a leading supplier of factory automation equipment for small part assembly, inspection, testing, and packaging located in Quakertown, PA, announced the recent introduction of “Controls In A Box™”, a ready-to-use bolt-on control system.

Controls In A Box is a bolt-on power supply and programmable controls system designed for small machine applications. It comes with 24VDC Power Supply, pre-programmed PLC, pre-programmed operator interface to display alarms and machine status, and I/O connectors for quick and easy installation. Installation includes mechanically mounting the control box, field wiring the I/O, powering up, and programming the equipment with the SuperWedge™ program utility developed by Demco.

Controls In A Box eliminates the need for high end IT personnel and allows machine builders to program their own equipment with Demco’s point-and-click SuperWedge™. “We view this as an exciting step forward in developing new products around the Wedge™ platform,” states Duemler. “Instead of buying a PLC and then designing a panel box, interface, and the other aspects of controls, Controls In A Box is a tool that allows companies to immediately employ the power of PLCs quickly and painlessly.”

Demco’s main product line, the Demco Wedge, is a programmable, modular assembly automation machine that gives manufacturers greater flexibility to meet market demands in the ever-changing competitive global market. The Demco Wedge software architecture, combined with its flexible mechanical platform, allows for quick and easy line conversion in order to run multiple products on the same line.

Demco Automation, a graduate of Northeast Pennsylvania’s Ben Franklin Partnership program, has made its mark in cellular automation in the past five years, with product installations in industries including electronics, automotive, telecommunications, pharmaceutical, and medical devices. For more information, call (215) 538-9700.
