- Welded Steel frame with Anodized aluminum table top with extruded aluminum guarding.
- **DENCO** Base configuration and **SUPERWEDGE** software supplied with chassis.

AVAILABLE OPTIONS

- 1 or 2 up assembly
- HEPA filter available for clean room environment inside chassis.
- **DENCO WEDGE MONITOR** production software package to record production and downtime machine status.
- Configurable light tower with alarm horn.

DESCRIPTION

The MM-02 Manual chassis is utilized when an operator is required to operate one or two stations in a manual fashion.

A holder is supplied to mount a workpiece nest. The operator moves the part from one nest to another and depresses the safety buttons. The stations then perform their required operation.

Alarm and production data are displayed on the multi-position touch panel display. This data can also be stored with the optional **WEDGE MONITOR** production software.

The MM-02 is the perfect low volume production solution.
