SUPERWEDGE STATION PROGRAMMING SOFTWARE

SUPERWEDGE BENEFITS

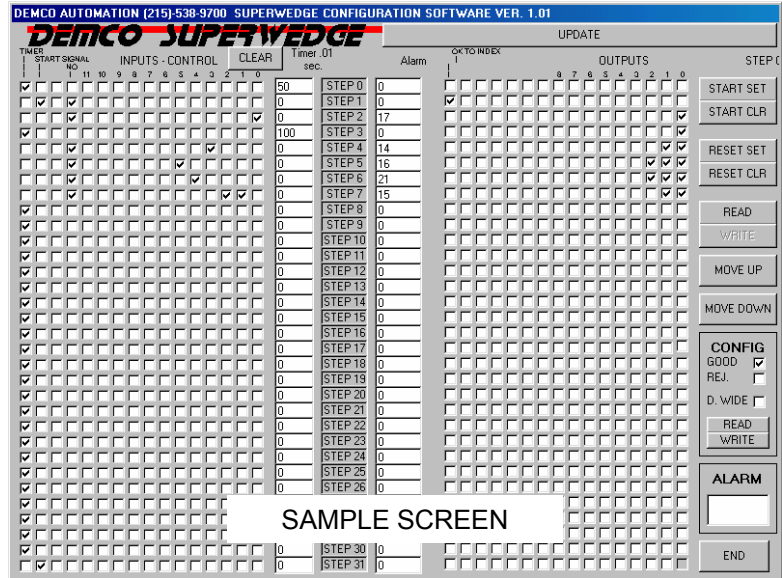

- Allows programming and modifications of stations without any ladder logic knowledge.
- Allows instant automatic identification of where the program has stopped.

STANDARD FEATURES

- **OPERATIONAL MODES** This allows setting of station operational mode. A station can be set to run on good parts, reject parts, or all the time.
- **ALARM HANDLING** Built in alarm handling enables the programmer to simply enter an alarm code that they wish displayed on the operator screen.
- **TIMER STEPS** Configuration of a timer step is as easy as selecting the appropriate check box and entering in a timer value.

TRAINING CLASSES AVAILABLE

PLEASE CONTACT DEMCO FOR INFORMATION AND SCHEDULES

DESCRIPTION

When the **DEMCO WEDGE** system was originally developed, one of the initial challenges was to develop a system that allowed end-users to easily de-bug and program the stations. The **SUPERWEDGE** software was developed to address this challenge.

With the **SUPERWEDGE**, the end-user can easily program a station by simply clicking check boxes, entering timer values and setting up alarm codes. No knowledge of ladder logic or other high level languages is required. All protocol for interface to the base chassis is handled in the background transparent to the operator.

One of the greatest benefits of the **SUPERWEDGE** software is for maintenance. With a click of a button, the software instantly points the cause of an alarm, giving instant feedback to the cause of the problem. Gone are the days of searching thru pages of ladder logic, trying to identify faults.

HOW TO ORDER

SUPERWEDGE IS SUPPLIED FREE OF CHARGE WITH ANY DEMCO CHASSIS PURCHASE. IT IS NOT AVAILABLE FOR INDIVIDUAL SALE
